Advanced Mechanism Design. The final project for the Advanced Mechanism Design class was a seemingly simple one: design a six bar mechanism that performs a real task. In a group of three, we settled on the concept of a wakeboard tower mechanism for a boat. Background. The elevated towing position given by a wakeboard tower reduces the downward pull of the rope on the airborne wakeboarder and allows the rider to achieve more launch and longer air hang time.

We study the role that privacy-preserving algorithms, which prevent the leakage of specific information about participants, can play in the design of mechanisms for strategic agents, which must encourage players to honestly report information. Specifically, we show that the recent notion of differential privacy [15, 14], in addition to its own intrinsic virtue, can ensure [...]

This book fails to teach one any of the fundamentals associated with mechanism design. The examples are poor and do not give much context to the problem solution. This book may be better suited as a reference for mechanism design as one of its author (a professor at my university) is world-renowned for his work in mechanism.
