As the required textbook for NAEMTUs worldwide prehospital trauma life support courses, this is the definitive resource for learning basic and advanced prehospital trauma skills and concepts. Now revised and expanded to cover all aspects of military prehospital trauma with 12 new chapters, this edition is tailored expressly for the military.

Trauma surgery has

increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal vascular, thoracic, urologic, gynecologic, and orthopaedic procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical, up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma (and especially spinal trauma)

and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision

guidelines recommend a digital rectal examination (DRE) as part of the initial evaluation of all trauma patients. The finding of decreased or absent anal sphincter tone during the DRE is suggestive of spinal cord injury. Hypothesis: The primary goal of this paper was to evaluate whether or not performing a digital rectal exam on trauma patients increases the likelihood of detecting a spinal cord injury, in the hopes that, when appropriate, the digital rectal examination may be deferred during the initial trauma evaluation. Study Design: An exhaustive search

of the available medical literature was performed, and relevant articles were analyzed to determine their validity and usefulness in answering the clinical question. Methods: Ovid MEDLINE, CINAHL (EBSCOhost) and PubMed were searched using the keywords "digital rectal examination AND trauma OR wounds and injuries." Bibliographic references found in the most relevant articles were also reviewed to identify additional applicable literature. Results: Five articles were found that met all selection criteria, four of which were retrospective chart reviews, and one of
