Darrell Vodopich, co-author of Biology Laboratory Manual, has written a new lab manual for ecology. This lab manual offers straightforward procedures that are do-able in a board range of classroom, lab and field situations.

Mader includes revised coverage of animal behaviour and ecology as well as a wealth of new focus boxes which highlight topics of high interest and relate biology to everyday life. This text is linked to a web site offering extended chapter outlines.

THE MADER/WINDELSPECHT STORY... The twelfth edition of Biology is a traditional, comprehensive introductory biology textbook, with coverage from Cell Structure and Function to the Conservation of Biodiversity. The book, which centers on the evolution and diversity of organisms, is appropriate for any one- or two-semester biology course. Biology, 12th Edition is the epitome of Sylvia Mader's expertise. Its

concise, precise writing-style employs lucid language to present the material as succinctly as possible, enabling students—even non-majors—to master the foundational concepts before coming to class. “ Before You Begin ” , “ Following the Themes ” , and “ Thematic Feature Readings ” piece together the three major themes of the text—evolution, nature of science, and biological systems. Students are consistently engaged in these themes, revealing the interconnectedness of the major topics in biology. Sylvia Mader typifies an icon of science education. Her dedication to her students, coupled with her clear, concise writing-style has benefited the education of thousands of students over the past three decades. The integration of the text and digital world has been achieved with the addition of Dr. Michael Windelspecht ’ s facility for the development of digital learning assets. For over ten years, Michael served as the Introductory Biology Coordinator at Appalachian State University—a program that enrolls over 4,500 non-science majors annually. Michael is the lead architect in the design of McGraw-Hill's Connect Plus and LearnSmart media content for the Mader series. These assets allow instructors to easily design interactive tutorial materials, enhance presentations in both online and traditional environments, and assess the learning objectives and outcomes of the course.

Written for the laboratory that accompanies the sophomore/junior level courses in Organic Chemistry, Zubrick provides students with a valuable guide to the basic techniques of the Organic Chemistry lab. The book will help students understand and practice good lab safety. It will also help students become familiar with basic instrumentation, techniques and apparatus and help them master the latest techniques such as interpretation of infrared spectroscopy. The guide is mostly macroscale in its orientation.

Explores the work of lesser-known American experimental filmmakers whose films, though well-received

and influential, have been excluded from the dominant film canon.

Since his New York Times op-ed column debuted in 2011, Mark Bittman has emerged as one of our most impassioned and opinionated observers of the food landscape. The Times' only dedicated opinion columnist covering the food beat, Bittman routinely makes readers think twice about how the food we eat is produced, distributed, and cooked, and shines a bright light on the profound impact that diet—both good and bad—can have on our health and that of the planet. In *A Bone to Pick*, Mark's most memorable and thought-provoking columns are compiled into a single volume for the first time. As abundant and safe as the American food supply appears to be, the state of our health reveals the presence of staggering deficiencies in both the system that produces food and the forces that regulate it. Bittman leaves no issue unexamined; agricultural practices, government legislation, fad diets, and corporate greed all come under scrutiny and show that the issues governing what ends up in our market basket and on our tables are both complex and often deliberately confusing. Unabashedly opinionated and invariably thought provoking, Bittman's columns have helped readers decipher arcane policy, unpack scientific studies, and deflate affronts to common sense when it comes to determining what "eating well" truly means. As urgent as the situation is, Mark contends that we can be optimistic about the future of our food and its impact on our health, as slow-food movements, better school-lunch programs, and even "healthy fast food" become part of the norm. At once inspiring, enraging, and enlightening, *A Bone to Pick* is an essential resource for every reader eager to understand not only the complexities inherent in the American food system, but also the many opportunities that exist to improve it.

This collection presents research-based interventions using existing knowledge to produce new pedagogies to

teach evolution to learners more successfully, whether in schools or elsewhere. ‘ Success ’ here is measured as cognitive gains, as acceptance of evolution or an increased desire to continue to learn about it. Aside from introductory and concluding chapters by the editors, each chapter consists of a research-based intervention intended to enable evolution to be taught successfully; all these interventions have been researched and evaluated by the chapters ’ authors and the findings are presented along with discussions of the implications. The result is an important compendium of studies from around the world conducted both inside and outside of school. The volume is unique and provides an essential reference point and platform for future work for the foreseeable future.
