This guide contains questions with answers likely to be asked in the question paper set for DBMS for B.E.(Comp. Sc.), MCA, M.Sc(IT), PGDCA and other IT related examinations. It includes eight Chapters and each chapter contains important questions with answers. This guide covers questions related to concepts of DBMS architecture, administration and fundamentals of database design. It covers topics like entity-relationship diagram, normalization, aggregation, functional dependencies and clustering. It contains questions related to transaction processing, security concurrency control, database recovery and query processing. Separate chapters are added to give coverage of SQL and Relational Algebra and Calculus. Ample numbers of diagrams are used to illustrate the answers for easy understanding. Sample papers with answers are also added at the end of this guide to evaluate progress by readers. Separate section is added to cover short questions with answers to prepare readers to answers objective type of questions that might be asked in examination and to assess their comprehension about the entire subject. A glossary of numerous technical terms is included for easy understanding of the subject matter.

Most Important Questions for CA Inter EIS-SM containing 125 Questions with Answers for Nov 20 Attempt.

This book constitutes the thoroughly refereed proceedings of the Second International Conference on Machine Learning for Networking, MLN 2019, held in Paris, France, in December 2019. The 26 revised full papers included in the volume were carefully reviewed and selected from 75 submissions. They present and discuss new trends in deep and reinforcement learning, pattern recognition and classification for networks, machine learning for network slicing optimization, 5G system, user behavior prediction, multimedia, IoT, security and protection, optimization and new innovative machine learning methods, performance analysis of machine learning algorithms, experimental evaluations of machine learning, data mining in heterogeneous networks, distributed and decentralized machine learning algorithms, intelligent cloud-support communications, resource allocation, energy-aware communications, software defined networks, cooperative networks, positioning and navigation systems, wireless communications, wireless sensor networks, underwater sensor networks.

This book provides extensive insights on blockchain systems, starting from a historical perspective and moving towards building foundational knowledge, with focus on communication networks. It covers blockchain applications, algorithms, architectures, design and implementation, and security and privacy issues, providing the reader with a comprehensive overview. Further, it discusses blockchain systems and its integration to communication networks. The book includes hands-on, practical tutorials, self-assessment exercises, and review questions; tips and sample programs are also provided throughout. Complementary supporting material for instructors, including open source programming code for practical tutorials and exercises, is also available. The target audience includes graduate students, professionals, and researchers working in the areas of blockchain systems, distributed ledger technology, computer networks and communications, artificial intelligence, and cybersecurity.
