In this plate tectonics activity, students analyze the tectonics of a simple fabricated flat planet (called Geoworld) that features continents with ancient mountain ranges, oceans (complete with magnetic "stripes" and a hotspot volcanic chain), an island arc and a trench. Activities include dating the initiation of sea-floor spreading, determining the sense of offset on transform faults, calculating relative and absolute rates of plate motion, drawing whole-lithosphere cross-sections, and ...

Geoworld has a plate tectonics system just like ours on Earth, only Geoworld is flat instead of spherical. In answering the questions below, you may assume Magnetic Polarity Time Scale that the movement rates for plates (both relative and absolute) are constant 0 throughout the time between your past and future reconstructions (they were, however, quite different at one time - see Part 1, A., questions 6 and 7).
