JSON is an acronym for JavaScript Object Notation.

Douglas Crockford originally specified the JSON format in the early 2000s. The features of JSON are as follows: JSON data is much

Where To Download

easier to read
by humans in
comparison with
that of XML
which is also
used to transfer
data from one
system to
another. It is
light weight
data interchange
format.

Introduction

JSON – short for
JavaScript

Object Notation

– is a format
for sharing
data. As its

name suggests, JSON is derived from the JavaScript Object Notation programming language, but it's available for use by many languages including Python, Ruby, PHP, and Java. JSON is usually pronounced like

The syntax
always follows
this pattern:
const objectName
= { member1Name:
member1Value,
member2Name:
member2Value,

Where To Download

```
member3Name:
member3Value };
```

The value of an object member can be pretty much anything – in our person object we've got a string, a number, two arrays, and two functions.
