Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

How do you write good research articles -- articles that are interesting, compelling, and easy to understand? How do you write papers that influence the field instead of falling into obscurity? Write It Up offers a practical and revealing look at how productive researchers write strong articles. The book's guiding idea is that academics should write to make an impact, not just to get something published somewhere. Your work will be more influential if you approach it reflectively and strategically. Based on his experience as an author, journal editor, and reviewer, Paul Silvia offers systematic approaches to problems like picking journals; cultivating the right tone and style; managing collaborative projects and co-authors; crafting effective Introduction, Method, Results, and Discussion sections; and submitting and resubmitting papers to journals. With its light-hearted style and practical advice, Write It Up will help graduate students struggling with writing their first paper, early career professors who need advice on how to write better articles, and seasoned academic writers looking to refresh their writing strategy or style.

One of the key tasks every researcher must perform is publishing their work, and most of this publication will occur in peer-reviewed journals. These publications are essential for promotion, recognition, and creating a dialogue with your colleagues around the world. Unfortunately, writing publication-quality manuscripts and guiding them through the peer-review process is a difficult, time-consuming, and often frustrating task. In this book, I'll teach you how to make the process easier based on what I've learned from more than 25 years of helping authors publish more than 6000 papers in some of the world's most prestigious journals (including Nature, Science, and PNAS). Writing for Science Journals explains the details of every section of a journal manuscript, including tips and tricks you won't find elsewhere about how to deal with the peculiar ways that journals work with authors and reviewers. I'll also deal with some of the implications of statistics and experimental design that you may have learned in school, but possibly not in an integrated form that guides you through the steps necessary to perform publishable research. In each chapter, I'll provide a list of key points that you can use as the basis for developing a learning plan. I've also provided links to relevant online resources via a Links page that is available only to purchasers of the book, and an errata and additions page (see below) that will provide a forum for expanding on the book until the 2nd edition is available.

In a world where the dead have risen and the living have nowhere to hide, two groups of survivors meet up in a town called Faith to make a stand against the walking dead, with the fate of mankind hanging on the outcome of the final conflict. "Dead Rising is a tour de force of apocalyptic survival. Hose hooks you with his characters and then reels you in with action, intrigue, and excitement. A must read for any serious fan of zombie lit." - William Todd Rose, author of Sex in the Time of Zombies

Paul LeBlanc has re-imagined higher education, with a focus on the most fundamental of functions: student learning. In Students First, he advocates for an entire higher education ecosystem in which students have the flexibility to gain, assess, and certify their knowledge on their own terms and timelines. In a perceptive analysis, LeBlanc provides a clear-eyed view of how and why higher education is failing to reach and serve a great many potential students. He then deftly explores how reform can address systemic inequities, improve college affordability, and broaden accessibility. Through case studies, he highlights alternative delivery models such as online, distance, and just-in-time learning, and envisions a learning environment that values competencies rather than credit hours. LeBlanc describes how these innovations and others will allow colleges and universities to help close the skills gap and respond to a rapidly evolving, technology-driven job market. Although a college education remains one of the great drivers of socioeconomic mobility, today's higher education industry has built financial, logistical, and practical barriers that keep out the very students who are most in need of opportunity. Students First makes a persuasive case that realigning US educational priorities will enable larger populations of graduates to enjoy return on investment in the form of good pay, meaningful work, and a stable future. As the book emphasizes, such change is imperative, for in better serving its students, higher education will better serve society.
