Figure 6 A parallelogram with one angle specified.  $m \angle A = m \angle C = 80^\circ$ , because consecutive angles of a parallelogram are supplementary.  $m \angle D = 100^\circ$ , because opposite angles of a parallelogram are equal.  $CD = 8$  and  $AD = 4$ , because opposite sides of a parallelogram are equal. Example 3: In Figure 7, find TR, QP, PS, TP, and PR.

Properties of Special Parallelograms

Special Properties of a Rectangle. Recall too that because a rectangle is a parallelogram, it has all the characteristics of a parallelogram. But it also has others: 1) All angles of a rectangle are right angles. Since a rectangle is a parallelogram, opposite angles are congruent and consecutive angles are supplementary.

Properties of Parallelograms Worksheet — Write on it! By definition, a parallelogram is a quadrilateral that has exactly two pairs of parallel sides. In this activity, you will investigate properties of a parallelogram. 1. Measure the four sides of the parallelogram below, using centimeters. What do you notice about the lengths of the opposite sides? Answer as a complete sentence.

Section 7.4 Properties of Special Parallelograms 433 The Venn diagram below illustrates some important relationships among parallelograms, rhombuses, rectangles, and squares. For example, you can see that a square is a rhombus because it is a parallelogram with four congruent sides. Because it has four right angles, a square is also a rectangle.

6-4 Properties of Special Parallelograms Check It Out! Example 2b CDFG is a rhombus. Find the measure.  $m \angle GCH$  if  $m \angle GCD = (b + 3)^\circ$  and  $m \angle CDF = (6b - 40)^\circ$   $m \angle GCD + m \angle CDF = 180^\circ$   $b + 3 + 6b - 40 = 180^\circ$   $7b = 217^\circ$   $b = 31^\circ$  Def. of rhombus Substitute. Simplify. Divide both sides by 7.

And a square is a parallelogram with four right angles and four congruent sides. But there ' s more! Let ' s take a look at each of their properties closely. Properties of a square. All four sides are congruent. All four are right angles. Diagonals bisect each other. Diagonals are perpendicular. Diagonals bisect vertices. Diagonals are congruent. Consecutive angles are supplementary. Properties of a rhombus. All four sides are congruent. Opposite angles are congruent. Diagonals bisect each ...

Special Parallelograms (19 Step-by-Step Examples!)

There are six important properties of parallelograms to know: Opposite sides are congruent ( $AB = DC$ ). Opposite angles are congruent ( $D = B$ ). Consecutive angles are supplementary ( $A + D = 180^\circ$  ). If one angle is right, then all angles are right. The diagonals of a parallelogram bisect each other. Each ...
