Automation doesn't have to be considered difficult anymore. It simply needs a system that erases the problems of isolated devices by making sure that all components communicate via one common language. At KNX all devices are connected to a common bus line (2 wires) which will be installed parallel to the mains circuit. Each device is mainly able to communicate with all the others. When a sensor is activated, the actuator carries out the desired orders and acts.

A smart home represents a home that has been furnished with appliances, devices and software applications that allows the residents to interact with the house. IoT here helps all the devices by making them stay connected to each other. As the name suggests, IoT with the help of the internet connects the devices within the home and transform it into a Wiser home. Find out more about Schneider ...

This book is for anyone who wants to learn Intel Galileo for home automation and cross-platform software development. No knowledge of programming with Intel Galileo is assumed, but knowledge of the C programming language is essential.

Los avances en el internet de las cosas (IoT), así como el disfrute del ocio y el entretenimiento en casa, la automatización, el control, la seguridad y hacer que el hogar sea respetuoso con el medio ambiente, ofrecen un nuevo y amplio abanico profesional. Este libro desarrolla y amplía los contenidos del módulo profesional de Sistemas Integrados y Hogar Digital del Ciclo Formativo de grado superior de Sistemas de Telecomunicaciones e Informáticos de la familia de Electricidad y Electrónica. Sistemas integrados y hogar digital, estructurado en 7 unidades y 2 apéndices, es un completo manual sobre el hogar digital: ---- Ofrece contenido generalista, al no ceñirse a ningún modelo o marca en concreto. ---- Expone los contenidos, lenguajes de programación, conexiones y aparataje de manera que puedan utilizarse cualquiera de los elementos y aparatos existentes en el mercado. ---- Resume la normativa de la manera más

clara y concisa posible, sin eliminar detalles importantes y utilizando las leyes, los decretos y las normativas más actuales. ---- Introduce casos prácticos resueltos y actividades que invitan a utilizar nuevos soportes digitales y controladores programables, así como nuevas técnicas educativas para potenciar la innovación. Esta obra está dirigida tanto al alumnado como a profesionales, y cualquier persona interesada en el hogar digital, el internet de las cosas, las comunicaciones, la domótica o la seguridad y las aplicaciones de ocio. Carlos Enrique Ruiz Buitrón, técnico especialista en Electrónica Industrial e ingeniero técnico en Informática de Sistemas, realiza su labor docente en la Formación Profesional Reglada y en la ocupacional, en las familias profesionales de Telecomunicaciones, Electricidad y Administración desde hace más de una década. Además, cuenta con experiencia profesional en las ramas de telecomunicaciones, informática y formación.

This book is a printed edition of the Special Issue "Real-Time Embedded Systems" that was published in Electronics

This authoritative new resource explores the power grid from its classical role as a utility or service provider towards its new role as an application development platform. This book gives insight into the vision, problems and solutions, and risks of the smart grid model. The evolution of the power grid as it develops into an application-centric environment is explained in this book. This resource guides readers to better understand the primary motivation of the smart grid, and to explore how new technologies are creating a cleaner and more sustainable ecosystem for new business models to blossom. Key topics include the basics of electricity and the conventional grid structure, as well as the relationships between conventional economic models and emerging models based on transactive energy and the sharing economy. This book presents the orchestration of smart grid technologies as they are transforming the utility sector toward a human-centric grid. Readers gain insight into how they are playing an active role in the operation of the utility business as well as in the transfer of electrons. This book demonstrates how the new smart grid is becoming a distributed system that supports decentralized services through modern trends and distributed system architectures. Readers learn how grid intelligence and energy production migrates to the edge of the network. This book explores how consumers are transformed to "prosumers" of energy and providers of critical data that are dramatically changing the relationship with the electric utility business in order to enable new applications and services.

This book examines seven key combinatorial engineering frameworks (composite schemes consisting of algorithms and/or interactive procedures) for hierarchical modular (composite) systems. These frameworks are based on combinatorial optimization problems (e.g., knapsack problem, multiple choice problem, assignment problem, morphological clique problem), with the author's version of morphological design approach – Hierarchical Morphological Multicriteria Design (HMMD) – providing a conceptual lens with which to elucidate the examples discussed. This approach is based on ordinal estimates of design alternatives for systems parts/components, however, the book also puts forward an original version of HMMD that is based on new interval multiset estimates for the design alternatives with special attention paid to the aggregation of modular solutions (system versions). The second part of 'Modular System Design and Evaluation' provides ten information technology case studies that enriches understanding of the design of system design, detection of system bottlenecks and system improvement, amongst others. The book is intended for researchers and scientists, students, and practitioners in many domains of information technology and engineering. The book is also designed to be used as a text for courses in system design, systems engineering and life cycle engineering at the level of undergraduate level,

graduate/PhD levels, and for continuing education. The material and methods contained in this book were used over four years in Moscow Institute of Physics and Technology (State University) in the author's faculty course "System Design".

Modern buildings are increasingly equipped with actuators and sensors, communication, visualization and control systems. This textbook provides an overview of industrial communication systems and stimulates a basic understanding of network and bus systems for the automation of buildings. After an introduction to EIB/KNX, LON und BACnet technologies, the authors illustrate how these systems can be utilized for specific applications, like air conditioning or illumination. This book assumes only a basic knowledge of mathematics and thanks to its simple explanations and many examples is ideal for students and professional engineers who require practical solutions.

This book constitutes the proceedings of the 17th International System Design Language Forum, SDL 2015, held in Berlin, Germany, in October 2015. The 15 full papers and 4 short papers presented in this volume were carefully reviewed and selected from 26 submissions. They are organized in topical sections named: smart cities and distributed systems; specification and description language; domain specific languages; goal modeling; use-case modeling; and model-based testing.

Las instalaciones domóticas han comenzado a formar parte del ADN de nuestros hogares: un hogar digital conectado, inteligente y adaptado a las necesidades de una nueva sociedad en continuo e incesante cambio y evolución. Este libro desarrolla los contenidos del módulo profesional de Configuración de Instalaciones Domóticas y Automáticas, del Ciclo Formativo de grado superior de Sistemas Electrotécnicos y Automatizados, de la familia profesional de Electricidad y Electrónica. Configuración de instalaciones domóticas y automáticas se ha renovado para que, en esta segunda edición, el lector se aproxime a la evolución que las instalaciones domóticas han sufrido en los últimos años, ayudándole a entender las distintas tecnologías y profundizar en su elección, instalación, puesta en marcha y verificación. La obra es un compendio de las principales tecnologías domóticas existentes en el sector. Se trata de una obra inédita que refleja la necesidad de profundizar en las tecnologías domóticas que cada día se incorporan a nuestros hogares, edificios o ciudades. El calificativo «inteligente» adquiere un nuevo significado, formando parte inherente de los objetos, instalaciones y otros entes que circundan a nuestro alrededor. Dirigida al alumnado de Ciclos Formativos, de Ingenierías e interesados en la temática en general, este libro persigue como objetivo permitir al lector conocer las instalaciones domóticas y las soluciones tecnológicas asociadas que existen en la actualidad, así como su evolución y tendencias.

Internet of Things: Connecting Objects puts forward the technologies and the networking architectures which make it possible to support the Internet of Things. Amongst these technologies, RFID, sensor and PLC technologies are described and a clear view on how they enable the Internet of Things is given. This book also provides a good overview of the main issues facing the Internet of Things such as the issues of privacy and security, application and usage, and standardization.
