Mit diesem Buch geben die Herausgeber einen umfassenden \u00dcberblick zur Nutzung von Informations- und Kommunikationstechnologien in St\u00e4dten und urbanen Gebieten, um den sozialen und \u00f6kologischen Lebensraum nachhaltig zu entwickeln. Unter dem Begriff „Smart City“ werden entsprechende Initiativen zusammengefasst. Dazu z\u00e4hlen Projekte zur Verbesserung der Mobilit\u00e4t, Nutzung intelligenter Systeme f\u00fcr Wasser- und Energieversorgung, F\u00f6rderung sozialer Netzwerke, Erweiterung politischer Partizipation, Ausbau von Entrepreneurship, Schutz der Umwelt sowie Erh\u00f6hung von Sicherheit und Lebensqualit\u00e4t. Das Herausgeberwerk widmet sich der Vielfalt dieser webbasierten Entwicklungen f\u00fcr urbane R\u00e4ume und zeigt erste Erfahrungen aus Pionierprojekten.Das Werk richtet sich an Stadtentwickler, Politiker und Citoyen sowie Wirtschaftsinformatiker. Es hilft dem Leser, Einsatzgebiete im \u00f6ffentlichen Lebensraum zu erkennen und L\u00f6sungsans\u00e4tze zu bewerten.

Smart City Governance examines public domain activities and services in the digital age, evaluating all facets of smart city e-governance that fosters a cohesive understanding for the emerging generation of advanced “digital natives. Exploring the tensions between political science and jurisprudence theories with the principles of societies and their alignment with legal systems, the book examines how governance systems can translate into the digital domain, addressing both the technical and legal dimensions. It offers a model for the technological foundation of governance, discussing existing technological components. The book concludes with a section on outlooks for further research. Explores the development of sustainable governance by examining how public domain governance can leverage the full potential of smart city technologies Provides insights on the technical side of smart city governance Fwels discussions on how tomorrow's urban public institutions can contribute to a more inclusive and participatory society Provides a system architecture blueprint based on the insights and lessons learned

This book provides theoretical perspectives and practical experiences on smart governance for smart cities. It presents a balanced linkage between research, policies and practices on this area. The authors discuss the sustainability challenges raised by rapid urbanization, challenges with smart governance models in various countries, and a new governance paradigm seen as a capable approach able to overcome social, economic and environmental sustainability problems. The authors include case studies on transformation, adaption and transfers; and country, regional, municipal contextualization. Also included are best practices on monitoring and evaluating smart governance and impact assessment. The book features contributions from researchers, academics, and practitioners in the field. Analyzes smart governance for cities from a variety of perspectives and a variety of sectors - both in theory and in practice Features information on the linkage between United Nations Sustainable Development Goals and smart governance Covers the connection between research, policies and practice in smart governance for smart cities

The technological advancements of today not only affect individual's personal lives. They also affect the way urban communities regard the improvement of their resident's lives. Research involving these autonomic reactions to the growing needs of the people is desperately needed to transform the cities of today into the cities of the future. Driving the Development, Management, and Sustainability of Cognitive Cities is a pivotal reference source that explores and improves the understanding of the strategic role of sustainable cognitive cities in residents' routine life styles. Such benefits to residents and businesses include having access to world-class training while sitting at home, having their wellbeing observed consistently, and having their medical issues identified before occurrence. This book is ideally designed for administrators, policymakers, industrialists, and researchers seeking current research on developing and managing cognitive cities.

Increasingly, we hear of ‘smart’ cities, communities, governance and people as constituting the basis of initiatives by which we might address various social and environmental problems, particularly those connected with sustainability, usually by means of an ‘intelligent’ connection with the ‘network society’. This book addresses the issues raised by the emergence of ‘smart’ dimensions and initiatives in society, critically engaging with questions surrounding the feasibility of what smart initiatives propose and the extent to which they can really offer solutions to the challenges we face. With attention to the notion of ‘smart’ as applied to the individual, the community, politics and the home, the authors consider the interconnections between these various facets of ‘smart living’ and their relationship to the notion of the smart society as a whole. Drawing on a concrete study of an attempt to concretize smart ideas in the design of a smart, solar home as part of an international project, Smart Society offers the first extended sociological engagement with the notion of smart living.

This edited volume discusses smart cities and smart governance within the framework of the 22nd century sustainable city. Written by members of the Smart Cities Smart Government Research Practice Consortium (SCSGRPC), an international multidisciplinary consortium of researchers and practitioners devoted to studying smart governance, this book provides a foundation for global efforts to envision and prepare for the next generation city by advancing understanding of the nature of and need for novel policies, new administrative practices, and enabling technologies required to advance urban governance, governments, and infrastructure. The chapters focus on practical models and approaches, theoretical frameworks, policy models, emerging issues, questions and research problems, as well as including case studies from different parts of the world. A valuable addition to the body of knowledge on smartness in urban government, this book will be of use to researchers in the fields of public administration, political science, information science, and information systems, as well as policy makers and government officials working on implementing smart technology in their cities.

This book seeks to contribute to prior research facing the discussion about public value creation in Smart Cities and the role of governments. In the early 21st century, the rapid transition to a highly urbanized population has made societies and their governments around the world to be meeting unprecedented challenges regarding key themes such as sustainability, new governance models and the creation of networks. Also, cities today face increasing challenges when it comes to providing advanced (digital) services to their constituency. The use of information and communication technologies (usually ICTs) and data is thought to rationalize and improve government and have the potential to transform governance and organizational issues. These questions link up to the ever-evolving concept of Smart Cities. In fact, the rise of the Smart City and Smart City thinking is a direct response to such challenges, as well as providing a means of integrating fast evolving technology into our living environment. This focus on the public value creation in Smart Cities could be of interest for academics, researchers, policy-makers, public managers, international organizations and technical experts involved in and responsible for the governance, development and design of Smart Cities

Implementing Data-Driven Strategies in Smart Cities is a guidebook and roadmap for practitioners seeking to operationalize data-driven urban interventions. The book opens by exploring the revolution that big data, data science, and the Internet of Things are making feasible for the city. It explores alternate topologies, typologies, and approaches to operationalize data science in cities, drawn from global examples including top-down, bottom-up, greenfield, brownfield, issue-based, and data-driven. It channels and expands on the classic data science model for data-driven urban interventions - data capture, data quality, cleansing and curation, data analysis, visualization and modeling, and data governance, privacy, and confidentiality. Throughout, illustrative case studies demonstrate successes realized in such diverse cities as Barcelona, Cologne, Manila, Miami, New York, Nancy, Nice, Sao Paulo, Seoul, Singapore, Stockholm, and Zurich. Given the heavy emphasis on global case studies, this work is particularly suitable for any urban manager, policymaker, or practitioner responsible for delivering technological services for the public sector from sectors as diverse as energy, transportation, pollution, and waste management. Explores numerous specific urban interventions drawn from global case studies, helping readers understand real urban challenges and create data-driven solutions Provides a step-by-step and applied holistic guide and methodology for immediate application in the reader's own business agenda Presents cutting edge technology presentation with coverage of innovations such as the Internet of Things, robotics, 5G, edge/fog computing, blockchain, intelligent transport systems, and connected-automated mobility

At a time when Asia is rapidly growing in global influence, this much-needed and insightful book bridges two major current policy topics in order to offer a unique study of the latest smart city archetypes emerging throughout Asia. Highlighting the smart city aspirations of Asian countries and their role in Asian governments' new development strategies, this book draws out timely narratives and insights from a uniquely Asian context and policymaking space.
