General Electric (GE) is a diversified industrial conglomerate with interests in power, aviation, industrial electronics, and financial services. A subsidiary of GE, GE Power manufactures primarily gas turbines, steam turbines, grid solutions, and support equipment for the power generation industry. General Electric acquired Alstom's power generation and transmission business in 2015 and absorbed it into the GE Power business. After the acquisition, renewable energy gradually became competitive with conventional sources of energy. As Alstom's portfolio was focused on conventional sources of power, the acquisition did not accrue value for GE Power as expected. Instead, it created redundancies for GE and led to post-acquisition integration problems. Larry Culp, the incumbent CEO of GE is pondering some strategic options available to revive the power business. Some options include divestiture of GE Power or bringing in new investors. Another option is restructuring the business into two separate business verticals for gas turbine and steam turbine business. He faces a dilemma to decide which option would be the optimal future strategy for GE Power.

Academic Paper from the year 2020 in the subject Business economics - Operations Research, grade: 97, , course: MAN 4504, language: English, abstract: This paper deals with General Electric's operation strategy, production and operating procedures, technology and automation, and CQM. General Electric has been a household name since 1892 when they bought Thompson Electric, Houston Electric, and Edison General Electric Company. Thomas Edison founded his company in 1878 to sell his incandescent light bulb. When GE acquired all the assets from Edison General Electric Company they also enlisted its founder who contributed to GE by allowing them to use his patents and he remained a consultant to the company for many years. (The Editors of Encyclopedia Britannica, 2020) GE makes a very wide range of products and services. Their consumer products are where a wide range of their products and services occur; however, GE makes most of its sales to the U.S. Department of Defense. GE has a remarkably diverse product line the market segments they work in are Power, Aviation, Capital, Healthcare, and Renewable Energy. Some of those product categories they make products or services for are: sensor-based measurement and asset condition monitoring, power generation products, renewable energy, and energy services, water & process technologies (Equipment, Chemicals and Services), healthcare technologies and services, mining solutions and services, life science research, pharma manufacturing, and diagnostic imaging, Transportation technology, supplies, and services, lighting solutions and services, aviation engines, components, systems, and services, electricity transmission, distribution, conversion, and consulting, software connected machines and devices, life science research, home appliances, pharma manufacturing, and diagnostic imaging, and transportation technology, supplies, and services.

Entrepreneur and bestselling author of *The Lean Startup*, Eric Ries reveals how entrepreneurial principles can be used by businesses of all kinds, ranging from established companies to early-stage startups, to grow revenues, drive innovation, and transform themselves into truly modern organizations, poised to take advantage of the enormous opportunities of the twenty-first century. In *The Lean Startup*, Eric Ries laid out the practices of successful startups - building a minimal viable product, customer-focused and scientific testing based on a build-measure-learn method of continuous innovation, and deciding whether to persevere or pivot. In *The Startup Way*, he turns his attention to an entirely new group of organizations: established enterprises like iconic multinationals GE and Toyota, tech titans like Amazon and Facebook, and the next generation of Silicon Valley upstarts like Airbnb and Twilio. Drawing on his experiences over the past five years working with these organizations, as well as nonprofits, NGOs, and governments, Ries lays out a system of entrepreneurial management that leads organizations of all sizes and from every industry to sustainable growth and long-term impact. Filled with in-the-field stories, insights, and tools, *The Startup Way* is an essential road map for any organization navigating the uncertain waters of the century ahead.

Applying this revolutionary management strategy to drive positive change in an organization Currently exploding onto the American business scene, the Six Sigma methodology fuels improved effectiveness and efficiency in an organization; according to General Electric's Jack Welch, it's the "most important initiative [they] have ever undertaken." Written by the consultant to GE Capital who helped implement Six Sigma at GE and GE's General Manager of e-Commerce, Making Six Sigma Last offers businesses the tools they need to make Six Sigma work for them--and cultivate long-lasting, positive results. Successful Six Sigma occurs when the technical and cultural components of change balance in an organization; this timely, comprehensive book is devoted to

the cultural component of implementing Six Sigma, explaining how to manage it to maintain that balance. The authors address how to create the need for Six Sigma; diagnose the four types of resistance to Six Sigma and how to overcome them; manage the systems and structures; and lead a Six Sigma initiative. This book applies the Six Sigma approach to business operations across the organization--unlike other titles that focus on product development. Plus, it provides strategies, tactics, and tools to improve profitability by centering on the relationship between product defects and product yields, reliability, costs, cycle time, and schedule. George Eckes (Superior, CO) is the founder and principal consultant for Eckes & Associates. His clients include GE Capital, Pfizer, Westin, Honeywell, and Volvo. Eckes has published numerous papers on the topic of performance improvement and is the author of *The Six Sigma Revolution: How General Electric and Others Turned Process into Profits* (0-471-38822-X) (Wiley).

A WALL STREET JOURNAL BESTSELLER "If you're in any kind of leadership role--whether at a company, a non-profit, or somewhere else--there's a lot you can learn here."--Bill Gates, *Gates Notes* How could General Electric--perhaps America's most iconic corporation--suffer such a swift and sudden fall from grace? This is the definitive history of General Electric's epic decline, as told by the two Wall Street Journal reporters who covered its fall. Since its founding in 1892, GE has been more than just a corporation. For generations, it was job security, a solidly safe investment, and an elite business education for top managers. GE electrified America, powering everything from lightbulbs to turbines, and became fully integrated into the American societal mindset as few companies ever had. And after two decades of leadership under legendary CEO Jack Welch, GE entered the twenty-first century as America's most valuable corporation. Yet, fewer than two decades later, the GE of old was gone. *Lights Out* examines how Welch's handpicked successor, Jeff Immelt, tried to fix flaws in Welch's profit machine, while stumbling headlong into mistakes of his own. In the end, GE's traditional win-at-all-costs driven culture seemed to lose its direction, which ultimately caused the company's decline on both a personal and organizational scale. *Lights Out* details how one of America's all-time great companies has been reduced to a cautionary tale for our times.

Research Paper (postgraduate) from the year 2017 in the subject Economy - Theory of Competition, Competition Policy, grade: B, University of Northampton, language: English, abstract: GE one of the most successful companies all over the world and it is managers factory. GE working in many fields, the main reason of its success the management way and the high innovative technology used in its products also, it is offering a high level of customer service for its high quality products as they are customer driven company GE give more interest to the customer's needs and working on solving their problems. GE not only working in the US but it is working in many countries around the world; it entered the global markets to find solutions to the local market's problems by its initiative products. Core competencies for GE are Technology & innovation, brilliant customer service, Product quality, Global presence. GE has many strategic plans for the future like superior technology and leading in the developing markets. GE was led by many great CEO's but most people affected its performance were Jack Welch and Jeff Immelt they have two different strategies and different leadership style, but both of them added too much to the company. General Electric Company founded in 1892 as a result of the merge between Thomas Edison's business interests and Charles Coffin's Thomson-Houston Electric Company; there are more than 300,000 employees in more than 100 countries working with GE. GE's vision "We bring good things to life" and its mission is to build, move, power and cure the world by its technology and advanced solutions to seek solutions to their customers and society.

The latest edition features a new chapter on implementation and operation of an integrated smart grid with updates to multiple chapters throughout the text. New sections on Internet of things, and how they relate to smart grids and smart cities, have also been added to the book. It describes the impetus for change in the electric utility industry and discusses the business drivers, benefits, and market outlook of the smart grid initiative. The book identifies the technical framework of enabling technologies and smart solutions and describes the role of technology developments and coordinated standards in smart grid, including various initiatives and organizations helping to drive the smart grid effort. With chapters written by leading experts in the field, the text explains how to plan, integrate, implement, and operate a smart grid.
